Biographical History

Marcel Lajos Breuer (1902-1981) was a Hungarian-born American Modernist architect and designer.

Marcel Breuer was born on May 21, 1902 in the southwestern Hungarian city of Pécs. His family home at 4 Irgalmasok Boulevard near Szechenyi square may have afforded a view of the nearby Pasha Qasim mosque (built from the ruins of a Gothic church), or the four landmark towers of the nearby Pécs Cathedral. Noted historically for its diverse ethnic population, Pécs had long been a regional cultural center and a university town (home of the 5th oldest university in Europe), as well as an important religious center. Breuer's father Jakab Breuer was a dental technician from Gyor, Hungary. Breuer's mother, Franciska Kann (sometimes given as "Kan") came originally from Budapest. Breuer had two older siblings, Alexander and Hermina Maria.

Always reticent about the facts of his early life, Breuer's formative years must have been marked by the profound political conflicts that defined the era. He would have been just twelve years old when Hungary entered World War I as part of the Austro-Hungarian/German alliance (incidentally, Breuer's subsequent architectural mentor and partner, Walter Gropius, was severely wounded in 1914 while serving as a German reservist on the Western Front). From 1918-1920, the Baranyi region surrounding Breuer's home town was heavily occupied by Serbian forces who, on the basis of ethnic nationalism, had made significant territorial claims there (tentatively resolved by the Treaty of Trianon in 1920). Against this backdrop, Breuer attended secondary school at Pécsi Allami Forealiskola where he excelled at art and mathematics, graduating summa cum laude and earning a scholarship to the Akademie der bildenden Kunst in Vienna.

Breuer arrived in Vienna in the late summer of 1920, but he quickly abandoned the academy, instead taking up an apprenticeship in the shop of a local cabinetmaker by the name of Bolek. It was during this brief respite that Breuer learned about an innovative new school in Weimar from a fellow Hungarian, the Pécs born architect Alfred Forbat. Within a few weeks, Breuer had assumed a place as one of the 143 students enrolled at the Bauhaus in only the second year of its formative existence.

While there is some uncertainty as to exactly when Breuer began his studies at the Bauhaus during the fall of 1920, it is very likely that he arrived about six weeks into the term and began in the Vorkurs, or Preliminary Course, then taught by Johannes Itten. Later that year, he would have done work in the carpentry workshop under Walter Gropius, the Master of Form for the shop at that time, and Josef Zachmann, the shop's first Master of Craft. While many of the personal relationships forged during these years were crucial for Breuer's artistic development, perhaps none more so than his career-defining linkage with Walter Gropius, it was quite possibly the painter Paul Klee who exerted the most formative influence (later in life, Breuer recollected that Klee had been one of the two most important teachers in his life, the other being his high school geometry teacher). As Franciscono contends, in his history of the school, his [Klee's] lessons were conceived in terms closely analogous to those of architecture…painting itself was understood as a construction built up or put together from repeatable, more or less geometric -- in effect modular -- units in ways generally comparable to the way architecture is put together (quoted in Hyman, p.61, n.73).
Breuer's architectural training at the Bauhaus came largely through apprentice work done in Walter Gropius' active practice, as the school offered no formalized program in architecture during those early years. As such, Breuer gained much hands-on experience on a number of projects -- contributing furniture and interior designs to the collaborative Sommerfeld House project (1921), the Haus am Horn exhibition house (1923), and the Bauhaussiedlung housing project (planned 1922, but not built).

After completing his apprentice work at the Bauhaus, Breuer headed to Paris, eventually landing a position in the office of Pierre Chareau in September of 1924. By the following year though, he was back in Weimar to accept a position as instructor and head of the furniture and carpentry shop at the Bauhaus, just prior to its official relocation to Dessau. In additional to involvement in furniture and interior design work for the new Bauhaus buildings in Dessau -- contributing to the design and furnishing of the canteen, theatre and several of the Master's Houses -- Breuer also developed innovative architectural schemes for a series of houses for junior faculty members, known as the BAMBOS houses (1927).

It was during this second period at the Bauhaus (1925-1928) that Breuer began to make the innovative experiments with bent tubular steel furniture for which he became so famous. The first version of his iconic "B3" club chair was developed around 1925, and many experiments with cantilevered steel constructions rapidly followed. In 1926, Breuer established the Standard Möbel company and began marketing a full line of steel furniture. Later that year, Breuer married fellow Bauhaus graduate Marta Erps, a talented artist who had studied in the weaving workshop and collaborated with Breuer on the Haus am Horn interiors. Their marriage seems to have been short lived, as Erps left Germany sometime around 1928-1929 for Brazil, where she later had a successful career as a biologist and illustrator at the University of São Paolo. Breuer and Erps were officially divorced in 1934.

As internal politics at the Bauhaus grew increasingly volatile in the late 1920s, Breuer joined a major exodus from the school, following Gropius, Moholy-Nagy, Josef Albers, Herbert Bayer and others out of Dessau. Breuer made his way to Berlin, officially joining the Bund Deutscher Architekten and setting up an architectural practice with a former student, Gustav Hassenpflug as his assistant. His commissions were small, primarily apartment and commercial interiors, but he also completed a number of formalized designs for competitions and was represented at many important exhibitions of the period, including the Weissenhof estate exhibition (1928), the Paris exposition of 1930 and the Berlin Building exhibition of 1931. In 1932, Breuer secured his first independent architectural commission to build a modern house in Wiesbaden for Paul and Marianne Harnischmacher. During this period, Breuer also maintained a partnership in Budapest with Farkas Molnár and József Fischer and traveled extensively through southern Europe and North Africa. In 1935, with the assistance of Gropius, Breuer secured papers to relocate to London where he practiced for a short time in partnership with British architect F.R.S. Yorke, while independently developing a line of bent plywood furniture that was marketed through Jack Pritchard's Isokon Control Ltd.

Frustrated by the limited building prospects in England and always concerned about the possibility of political deportation, in 1937 Breuer was again on the move. The efforts of Gropius were once more instrumental, as he was able to help secure for Breuer a faculty position at
Harvard University's Graduate School of Design. Aesthetically, Breuer was well suited to his new environment, sharing with his fellow Bauhaus émigrés a strong appreciation for the structural transparency and efficient design of American industrial buildings. The strong appeal of the traditional New England domestic architecture, though, with its reliance on native stone and balloon-frame construction proved an unexpected source of inspiration for many of the European Modernists, Breuer included. He spent roughly the next decade making his mark with a series of iconic modern houses spread across Massachusetts, Connecticut, Pennsylvania and New York (for more on the influence of American domestic architecture on Breuer's mid-century work, see Bergdall, Encountering America: Marcel Breuer and the Discourses of the Vernacular from Budapest to Boston, in *Marcel Breuer: Design and Architecture*).

Initially, Breuer practiced in the U.S. in partnership with his long-time mentor under the official designation, "Walter Gropius and Marcel Breuer, Architects." The partnership was relatively fruitful during lean economic years, producing a series of now canonical houses, including the Frank House in Pittsburgh (1939), the Hagerty House in Cohasset (1938) and, the Ford (1939), Gropius (1938) and Breuer (1939) houses at the Woods End colony in Lincoln, Massachusetts. In 1940, Breuer married his second wife, Constance Crocker Leighton. Connie, a native New Englander, had grown up in Salem, Massachusetts and attended the Brimmer School. Originally a secretary for Gropius and Breuer, she played an important role in the formative years of Breuer's Cambridge practice (for a brief period, her father, O.S. Leighton, also served as a sort of business manager and accountant for Breuer). Their son, Tamas (Thomas) Breuer was born in 1943.

The Gropius-Breuer partnership ended in 1941, and Breuer set-up shop on his own in Cambridge with the assistance of several of his former Harvard design students. Although work came slowly at first -- building supply shortages during the war made new construction a difficult endeavor -- by the mid-1940s, the Breuer office was operating at a robust pace.

Breuer took several of his Cambridge cohorts to New York in the spring of 1946, opening a practice there on 438 East Eighty-Eighth Street. The subsequent phase of work in the late 1940s marked the pinnacle of Breuer's domestic architectural production. Working from his fundamental conception of the bi-nuclear arrangement of living areas, Breuer progressively refined his design vocabulary into a popular signature style. Stand-out designs of this period include the Geller House I (1945), Robinson House (1948) and Thompson House (1949), as well and the House in the Museum Garden, constructed for a 1949 MoMA exhibition on the modern house.

The 1950s saw the exponential growth of Breuer's creative prospects and subsequent emergence internationally as a seminal figure of modern design (one of the canonical form-givers of the twentieth century, as dubbed in a 1956 *Time* magazine piece). In an astonishing creative outburst, encompassing roughly the ten year span from 1953-1963, Breuer saw the realization of the half-dozen or so masterworks most definitive of his major phase: the UNESCO headquarters in Paris (1953), Saint John's Abbey Church in Minnesota (1953-1958), the De Bijenkorf Department Store in Rotterdam (1953), the United States Embassy at the Hague (1956), the IBM Research Center in La Gaude, France (1960), and the Whitney Museum of American Art in New York (1963). Breuer's work during this period was largely defined by the transition from small-
form, residential projects in wood and stone, to monumental sculptural forms rendered in patterned concrete and steel.

In 1956, in order to accommodate the rapid boom in large-project commissions coming into his office, Breuer sought to formalize a partnership agreement with several of the young and talented architects in his employ. Stipulating a formative ten year period under the designation associate, Breuer promised eventual full partnerships to his colleagues. Operating thereafter as Marcel Breuer and Associates, by 1967 Herbert Beckhard, Hamilton Smith and Robert Gatje had all achieved full partner status (former partner Murray Emslie had left the firm in 1965). Later, Tician Papachristou also achieved partner status in the firm.

By the mid-sixties, Breuer had settled his operations at 635 Madison Avenue in New York, and had opened a much needed European office on the Rue Chapon in the former garment district of Paris, an office established by Robert Gatje and later run by Mario Jossa to manage projects at Flaine, the ZUP development in Bayonne and elsewhere on the continent. During these years, Breuer's collaborative partnerships with Smith, Gatje, Beckhard and Papachristou reached their productive peak, yielding a formidable and diverse roster of works: the IBM France complex, the Flaine resort, the Armstrong Rubber Building with Robert F. Gatje; Annunciation Priory, the Whitney Museum of Art, the Grand Coulee Dam Project with Hamilton P. Smith; the HUD and HEW buildings in Washington, D.C. and the Church and Refectory of St. Francis de Sales with Herbert Beckhard; the Soriano House and Stillman House III, with Tician Papachristou.

The effects on Breuer of many years of incessant work and travel began to show by the early 1970s, and after a harrowing trip to Afghanistan that saw Breuer suffer a nearly fatal heart attack, his day-to-day working role in his firm significantly diminished. Breuer's declining health coincided with a difficult economic climate for building; regardless, Marcel Breuer and Associates continued to realize significant building projects throughout the seventies, including the Atlanta Public Library (1971-1980), the American Press Institute in Reston, Virginia (1971), and the Australian Embassy in Paris (1973, with Harry Seidler). These years also saw the realization of two late-phase minor masterpieces -- the third Stillman House (1972) and the stunning slate-roofed Chapel at Flaine (1974-1976). Despite his formal retirement on March 1, 1976, Breuer refused to abandon work altogether, characteristically vowing to his supervising architect at the Baldegg Convent site that he would remain on the project until it was done. The last decade of Breuer's life saw a number of prominent honors and exhibitions of his work. In addition to an honorary doctorate from the Budapest Technical University in 1970, there were major exhibitions at MoMA (1981) and at the Bauhaus-Archiv Museum in 1975 (the first exhibition of his work in Germany since his days at the Bauhaus), as well as a major retrospective exhibition at the Metropolitan Museum of Art in New York (1972-1973), the first ever one-man architectural show in the Met's history. Marcel Breuer died July 1, 1981.

**Scope and Contents of the Collection**

The **Marcel Breuer Papers** collects over sixty years of work product generated by a prolific international architectural practice spanning a large part of the twentieth century. The comprehensive collection includes architectural drawings, photographs, project files, published materials, writings, interviews and other materials from every phase of Marcel Breuer's long and distinguished career. In addition, the collection contains biographical material, material related to Breuer's teaching days at Harvard University's Graduate School of Design, and material representing his many professional endeavors including awards, exhibitions, writings on architecture and correspondence with artists, architects, editors and clients.

Material in the **Personal papers** series ranges from Breuer's days as an instructor at the Bauhaus in Dessau to the centenary celebration of his birth held at St. John's University in 2001/2002. The bulk of the material consists of Financial records from his early years in the United States (1937-1943).

The **Professional papers** series collects material related to Breuer's professional endeavors as an architect and includes records related to awards, exhibitions and juries, as well as non-project related correspondence with important artists, architects, editors and patrons. Additional project
related material can be found in the writings and publications subseries, and in the scrapbooks of press clippings and memorabilia that Breuer maintained through the 1940s.

**Faculty papers** contains administrative and course material from Breuer's years on the faculty of the Graduate School of Design at Harvard University (1939-1948).

The vast bulk of the **Office records** series consists of interoffice correspondence between Breuer's New York and Paris offices between the years 1964-1978. In addition, there are Financial documents and bills, most of which date from the late 1930s to the early 1950s (including small amounts of material from the Breuer-Yorke and Breuer-Gropius partnerships), and extensive travel files (1938-1970) documenting travel arrangements, schedules, contact lists and itineraries for Breuer's many travels during these years. The Administrative Records sub-series includes the Marcel Breuer and Associates partnership agreement and miscellaneous files related to Breuer's architectural licenses.

**Sketchbooks** contains a number of Breuer's sketchbooks with designs for houses (exteriors and interiors), furniture, and more. All drawings have been digitized and can be found in the Marcel Breuer Digital Archive.

The **Furniture** series collects materials related to Breuer's furniture designs and furniture business dealings. This series contains several hundred original furniture drawings, and represents the four major phases of Breuer's furniture work -- wood, tubular steel, aluminum and bent plywood. This series also contains Correspondence (1920s-1960s) with manufacturers and distributors of Breuer furniture (Thonet, Embru, Isokon, Gavina), correspondence with patent attorneys and agencies (including patent applications and drawings), as well as Financial documents, license agreements and contracts. There are a few files related to furniture design competitions, as well as furniture photographs and slides, articles and clippings. Of special note in the Published materials series are several early furniture catalogs from Thonet and Wohnbedarf, including the Herbert Bayer designed Wohnbedarf aluminum furniture catalog.

The **Project records** series contains the vast bulk of the collection and consists of architectural drawings, project files (correspondence, specifications, Financial records, product literature), published materials and photographs documenting the process of architectural design development, project construction and subsequent presentation/reception of completed projects. The extent of documentation varies by project, but the entirety of Breuer's career is represented, including his earliest architectural work at the Bauhaus (1923-1928), his subsequent work as an independent architect in Berlin (1928-1931), his work in Budapest in partnership with Farkas Molnár and József Fischer (1933-1935), his work in London in partnership with F.R.S. Yorke (1935-1937), his early work in the U.S. in partnership with Walter Gropius (1937-1941) and, by far the majority of the collection, his work as an independent architect and head of the firm Marcel Breuer and Associates (1941-1976). In addition, the collection contains significant project work accomplished by the firm Marcel Breuer Associates after Breuer's retirement in 1976, as well as work completed by his associates under the name BreuerA after his death in 1980. [See Biographical History above for additional information on Breuer's associated firms and partnerships.]

Most of the material in this subseries consists of correspondence with artists, architects, publishers and government and corporate entities. Notable among the many correspondents are numerous Bauhaus affiliates (Josef and Anni Albers, Herbert Bayer, László Moholy-Nagy), important architects and critics (Philip Johnson, I.M. Pei, José Luis Sert, Eduardo Catalano, Henry-Russell Hitchcock), modern artists (Alexander Calder, Henry Moore, Joan Miró, Kurt Schwitters), clients and friends (Crofton Gane, Paul and Marianne Harnismacher, Edgar Kaufmann Jr., Jacques Koerfer, Jack Pritchard, Hans Falkner). The Professional Correspondence series also contains letters from many of Breuer's former partners -- Walter Gropius, Farkas Molnár, Joszef Fischer and F.R.S. Yorke.

Correspondence foldered in alphabetical order by correspondent.

Donated to Syracuse University Library by Constance Breuer a few years before her death (2002), these brittle drawings were conserved by having them deacidified, encapsulated, and bound. Isabelle Hyman and Joachim Driller, noted Breuer researchers, have contributed to the identification of many of the drawings. All drawings have been digitized and can be found in the Marcel Breuer Digital Archive.

The bulk of the material consists of correspondence between Breuer and the Kaufmans, as well as a variety of cost computations/comparisons done by Breuer. Retained by Edgar Kaufmann, Jr. to investigate possibilities for a proposed New York City apartment building, Breuer located 3 potential site options -- Sutton Place, Washington Square and 415-423 E. 79th St. ("East Side Apartments"). In addition, Breuer proposed various building options including 6, 10 and 14 story buildings.

**FRANK HOUSE, Pittsburgh, PA (1939-1940). Walter Gropius and Marcel Breuer, Architects. [Residential, Single]**

*(Alternate names: House in Pittsburgh)*

Drawings for the Frank House, while extensive, are almost exclusively of custom furniture designed by Breuer for this residence, and, with the exception of a single sketch, do not pertain to the design or construction of the building itself. The project files also represent the second phase of the Frank House project: design and fabrication of furnishings and interiors. Gropius and Breuer were commissioned for this phase in addition to their work on the design and construction of the Frank House itself. Drawings and other materials related to the house construction can be found through the Marcel Breuer Digital Archive. Additional drawings and photographs related to the Frank House furniture designs can be found in the Furniture section of the finding aid.

SPORTS COMPLEX, Flushing Meadows-Corona, NY (1965-1968) (not built). Marcel Breuer and Herbert Beckhard, Architects. [Recreational]

(Alternate names: Flushing Meadows Park; Post World's Fair Development)
This multi-faceted development plan, sponsored by the New York City Department of Parks to re-develop a former World's Fair site, was structured as a joint enterprise with separate contracts between the city and independent architectural firms for the various components of the project. Marcel Breuer and Associates were contracted to complete designs for the South Complex and Spine Buildings. Kenzo Tange and URTEC were contracted to design the North Complex components, and Lawrence Halperin and Associates were to design the Central mall and to coordinate the Master Plan and Program in consultation with the other firms. Material in the collection primarily relates to several aspects of the South Complex work, including the Plaza, Spine Buildings, Indoor Arena, Swim-Bath Complex, as well as road and site development materials. The collection also includes materials from Kenzo Tange and URTEC related to the North Complex components of the project.

There is little additional information in the collection providing context for this late 1970s design proposal by the Breuer firm. According to an article published in The Register Citizen (Litchfield) on the occasion of the plant's demolition, this was the only of the Torin Corp buildings not designed by Marcel Breuer ("A piece of Torrington history is razed," The Register Citizen, 21 Mar 2010).

Design work for an additional office building at the UNESCO Headquarters complex began circa August 1960 with Breuer, Nervi and Zehrfuss as collaborators. The resulting 1960-1961 design was never realized. In 1965, an underground portion was built at the complex by Bernard Zehrfuss as sole architect.
