## FRESHMEN WIN ANNUAL RUSH

### Little Snow and Rush Becomes a Wrestling Match

Yesterday afternoon, in a mixture of mud, slush and snow, the freshmen won the long-expected snow rush. Immediately after the freshman classes in English and Latin were over at 4 o'clock, President Cope collected all the 1910 men available and ready for a scrap, in front of the Hall of Languages. The sophomores, not having work on the Hill on Wednesday afternoon, and from previous advices from the weather prophet that there would be little snow, were missing. The sophomores as a class agreed with the Dean that it was folly to rush with such poor weather conditions.

However, President Cope lined up his men and marched around the Hall of Languages. The 1910 men yelled and sang as they marched, reminding the faculty and bystanders of the similarity of the present with the past. It appeared as if the freshmen were afraid that the walls of the University would fall should they shout loudly enough.

Finally the fifty or more freshmen encountered eight sophomores and these eight sophomores decided to uphold the honor of their class in the best manner possible. The freshmen chose eight of their number who were to engage in battle with the 1909 men. The conditions were that the 1910 men should attempt to gain the ridge of snow on which the 1909 men were stationed and the class having the greater number of men on the ridge at the end of ten minutes would win. After a fine exhibition of rough and tumble wrestling in the conglomeration of slush and snow, the judges found two sophomores and three freshmen on the ridge and declared the freshmen winners.

### Comus Trials

The trial competition for parts in Milton's "Comus" will be held on Friday afternoon, March 15, at 4 o'clock in the chapel of the Hall of Languages. Competitors will be any fifteen consecutive members of the trial in open to all members of the University. There are six separate trials. The Spirit, The Lad, The Hero for women, Comus and the Hero for men. Ability will be the only standard. —H. A. Eaton, Chairman of the Committee of Arrangements.

### The Syracuse Glove Factory

Give all the ladies of this vicinity a select your Easter gloves, made of the best material, guaranteed. We have your suits. 222 W. Fayette St.

### COACH TO-GO FOR SHELL

The Committee on Eligibility of Candidates is Acting

The partial completion of the list of freshman crew eligible, the prospect of another cut in the candidates for the first year boat and the anticipation of a new shell are causing an interest in crew affairs today which is greater than is usual even at this time of year.

Coach Ten Eyck is feeling considerable uneasiness over the fact that the nearly completed list of those eligible for the freshman boat does not include some of the most promising men and that it is practically certain, although the work of the eligibility committee is not yet complete, that several of these very strong candidates will be obliged to cease work on the machines and boat and settle down to their studies.

Besides those men who will be dropped because of the shaky condition of their work, it is probable that several others will shortly feel the effect of the coach's pruning hook and give up all hopes of taking a trip to Poughkeepsie.

For some time the need of a second shell has been keenly felt. Recently Coach Ten Eyck received word that this boat is at Cambridge awaiting his coming to that place to claim and take back to Syracuse with him. Accordingly the coach will probably go to Cambridge the first of next week and return with the shell which is apt to be used at Poughkeepsie next June.

### WISCONSIN CREWS

Students Raise \$1,000 for Syracuse and Poughkeepsie Regattas

The one thousand dollars asked for by Dr. C. P. Hutchins of the University of Wisconsin for expenses of the crews has been raised among the students and the alumni will now be approached for the remaining \$2,000. The spirit shown by the students has been wonderful.

The money was raised by personal fraternity and class subscriptions and Director Hutchins expects the entire amount shortly. With such spirit behind his crews Coach Ten Eyck of Wisconsin intends to make the Easterners row some for their laurels.

The authorities of the Badger institution are planning a great reception for the crews coached by Syracuse's veteran "Jim" Ten Eyck and will do all they can to make that day a day long to be remembered in Wisconsin's history.

### Professor Hopkins Speaks

Last night Professor T. C. Hopkins delivered his famous lecture "The Heart of the Rockies" in the chapel of the Hall of Languages. The lecture was intensely interesting and was illustrated by a fine collection of lantern slides obtained by Professor Hopkins in the Rockies last summer.

We set ourselves the task of producing Menus and Programs stamped with individuality and character. The June Press, 116 South Salina street. Th

## CARNEGIE LIBRARY EXCEEDS EXPECTATION

### Interior Completed in Two Months—New Features

The new library building, the gift of Andrew Carnegie, which was begun in September, 1905, and is rapidly approaching completion, will be one of the finest and most conveniently equipped libraries in any university. It not only makes a most decided improvement in the appearance of the campus, with its imposing architectural beauty, but its most interesting features are to be found within the building.

The main entrance leads into a beautifully decorated vestibule, twenty-two feet deep and sixty feet long. The floor of the vestibule is constructed of Tennessee marble in attractive patterns. It is ornamented with marble columns and pilasters of Doric style, extending to the cornice and is wainscoted with Tennessee marble and scagliola work in marble. The ceiling is paneled by heavy Doric cornices parallel with the vestibule, and connected with it by wide arches between marble pillars in the alcove containing double-faced stacks and reading tables. These stacks will be used for the reference books as they are required from time to time in the different courses.

Opening from this through archways is the main reading room, the crowning feature of the building. The room is sixty feet square and is forty-eight feet from floor to ceiling. It is beautifully ornamented with Tennessee and Scagliola marble, producing a magnificent effect with the artistically paneled cornices. The floors, as well as the floors of all the corridors, will be of corticene, a composition that will be absolutely noiseless. It is equipped with twenty-four reading tables, and on the south side of the room, communicating with the stack room, is the delivery desk, at either side of which is a double-faced card catalogue cabinet.

The stack room occupies the extreme south side of the building, and is eighty feet by thirty-six feet in size and extends from the basement to the roof, a height of sixty-six feet. This will be equipped in the most modern style by the Library Bureau of Boston, Mass., and will accommodate four hundred thousand volumes. It will consist of seven tiers of stacks and each tier will be in charge of an attendant. The book delivery is to be a novel feature. A person desiring a book refers to the card catalogue and gives the information to the librarian at the desk. The librarian communicates the information by telephone to the proper attendant, who places the volume in the book exit, which carries it to the desk. Telephones are to be used instead of speaking tubes for sanitary reasons.

(Continued on page 4.)

### INTERESTING LECTURE

Civil Engineers Hear About Tunnel Construction

Yesterday afternoon C. F. Taylor, C. E. '84, spoke to the civil engineers in room 26 A of L. C. Smith College. He related a short history of tunnel construction. By means of lantern slides he illustrated the construction of the East Boston tunnel, which tunnel was the first one made of concrete, and for that reason its construction was watched very keenly by all engineers.

Mr. Taylor graduated from Syracuse in 1884. At that time the University gave a civil engineering course. This course was carried along with the regular Liberal Arts course, and special work in the physics department and field practice. This course was abandoned in 1888.

Since graduating Mr. Taylor has been with the Dunfee Contracting Company, which constructed the East Boston tunnel. At present he is interested in the construction of tunnels and subways about New York city.

### IAN MACLAREN TO LECTURE

Famous Author of "Beside the Bonnie Brier Bush" to Visit Syracuse

Monday evening at the Plymouth Congregational Church Dr. John Watson, otherwise known as "Ian MacLaren," will deliver one of his famous addresses.

Dr. Watson was born in England in 1850 and was licensed as a curate of Barclay Church, Edinburgh, in 1874. He has received many honorary degrees from both English and American universities and has held many offices in the Presbyterian Church of England.

Dr. Watson is the author of "Beside the Bonnie Brier Bush," "The Heart of Auld Lang Syne," and other works, and has written many theological works.

The last time this author was in Syracuse crowds were attracted from the Alhambra to see and hear that another large audience to greet him on Monday evening. Tickets for the lecture are on sale at 50c.

### INTER-SORORITY BOWLING LEAGUE

The University of Wisconsin boasts of an inter-sorority bowling league. The league is divided into two divisions, the first consisting of Pi Beta Phi, Gamma Phi Beta, Kappa Kappa Gamma, Gamma Gamma and Alpha Gamma Delta, and the second consisting of Alpha Gamma Delta, Alpha Gamma Delta, Kappa Gamma and Gamma Delta. The teams will meet weekly.
